# PROFESSIONAL TEAM CNC/3D PRINTING

for AY 2023-2024

Computer Numerical Control Machining is a process used in modern manufacturing sector that involves the use of computers to control machine tools. To survive in global market CNC machines are must to achieve close tolerances and to increase productivity.

3D printing, also known as additive manufacturing, creates three-dimensional components from CAD models. The applications of 3D printing are ever increasing and it's proving to be a very exciting technology to look out for.
